Subject: Oregon future climate plans

Message: Climate catastrophes are accelerating 4 times faster than IPCC 2016 estimates, so emissions control should accelerate also at least that fast. Establishing 2040 targets is as good as doing nothing at all. Catastrophes will have completely overpowered us by then. But if nothing is done to reduce oil consumption - what's the point? Make gasoline really expensive. Step up gasoline prices \$1/year to make it too expensive to drive. That will solve gas consumption, road maintenance, congestion, need for new roads, etc.

Subject: Tigher Plan

Message: Dear Commission Members, thank you for this opportunity to give written testimony. I am an 80 year old Oregon resident and retired physician. I have read many of the scientific studies regarding climate change, watched with my own eyes as the effects of climate change have impacted me and become glaringly obvious. And I have become increasingly dismayed by the tepid response of governments locally, nationally and internationally.

We need strong action NOW. The Oregon Global Warming Commission has the responsibility to make the TIGHER PLAN as strong as it can be, maximizing reduction of greenhouse emissions, increasing the support of sequestration and, most importantly, developing measurable actions to be taken by state and local governments, businesses and individuals.

This is going to cost all of US dollars and convenience. Many selfish individual stakeholders will whine loudly about how this or that action is going to hurt their pocketbooks. Please do not heed them. WE ARE ALL IN THIS MESS TOGETHER. EVERY ONE OF US MUST SACRIFICE TO TO GET OUT OF IT.

Thank you for your time.
